

Docker and Kubernetes: The Complete Guide

Finished Code and Diagrams

Finished Code

Finished code is attached to each applicable lecture throughout the course. If you get stuck at any point you can download the code and compare it against yours with a diff tool like [Diffchecker](#) or VSCode's built-in comparison tool.

Diagrams

The diagrams shown in the course are attached to this lecture note as a zip file.

- Download the file and extract it somewhere on your computer.
 - Visit [diagrams.net \(formerly draw.io\)](#).
 - Select **Open Existing Diagram** and use the file explorer to select the diagram file from your computer.
- or
- Click on **File** from the diagrams.net menu.
 - Select **Open From Device** and use the file explorer to select the diagram file from your computer.

Note - Please understand, if a diagram or group of diagrams is missing, this means that we no longer have them to share. You'll need to use a good browser screenshot extension tool such as [Awesome Screenshot](#) to make a copy from the video lecture.
